

H&C HEAT AND COMBUSTION

THE DANFOSS FLANGED ROTARY SHOE VALVE

To further our commitment to you, our valued customers, we have in conjunction with Danfoss, updated our range of Rotary Shoe Valves to now include the Danfoss HF3 series.

HF3 SERIES 3 PORT ROTARY SHOE VALVES, 2 1/2" - 6"

Danfoss HF3 rotary valves are primarily designed for regulation of flow temperature in heating systems where a certain leakage can be accepted and where a defined control characteristic is not required.

- Cast iron body with flange connection
- Lowest leakage in class
- Valve position indicator
- Ergonomic handle
- For mixing and diverting applications
- Flange PN 6 connection

Before valve mounting, pipes have to be cleaned and free from abrasion. Mechanical loads on valve body caused by the pipes are not allowed. It is recommended to install a strainer into application to avoid damaging controlling components. HF3 can be used as a mixing valve, diverting valve and in connection with heat exchangers where a certain leakage can be accepted.

As always, we are eager to hear from you and would appreciate any and all feedback. If there is a particular product that would help you if we stocked it, let us know.
